Defences in Tort -Andrew Dyson 2015-02-26 This book is the first in a series of essay collections on defences in private law. It addresses defences to liability arising in tort. The essays range from those adopting a primarily doctrinal approach to others that examine the law from a more theoretical or historical perspective. Some essays focus on individual defences, while some are concerned with the links between defences, or with how defences relate to the structure of tort law as a whole. A number of the essays also draw upon concepts and literature that have been developed mainly in relation to the criminal law, and consider their application to tort law. The essays make several original contributions to this complex, important but neglected field of academic enquiry.
Wyatt and Dashwood's European Union Law -Alan Dashwood 2011-06-14 First published 30 years ago, Wyatt and Dashwood's European Union Law was a landmark publication, designed and written for students taking degree level courses in EU law. In the intervening years new editions have appeared at regular intervals, firmly establishing the book as a reliable and authoritative text. Besides introducing generations of students to the intricacies of European law it has also been increasingly relied upon by scholars, practitioners and the courts as a valuable source of reference on this complex and ever-expanding body of law. While the book cannot cover every aspect of the subject matter, it nevertheless offers comprehensive coverage of those aspects of EU law most commonly studied at degree level. Part I introduces the history and foundations of the Union's primary law. Part II looks at the Union's institutions, decision-making procedures and competences. It also deals with the Union judiciary, focusing on direct actions before the Union courts and preliminary references from national courts. The constitutional fundamentals of direct effect and supremacy, effective judicial protection before national courts, general principles of Union law and the Charter of Fundamental Rights are dealt with in Part III. Part IV covers the internal market: free movement of goods, Union citizenship, workers, establishment and services, the services directive, mutual recognition of qualifications, corporate establishment and company law harmonisation. Part V deals with competition law: Articles 101 and 102 TFEU, the enforcement of Union

competition rules and other related competition law issues. Part VI then includes a brand new chapter concerned with the EU's external relations, together with treatment of the legal effects of international agreements entered into by the EU. As with previous editions the aim is to provide an accurate, critical, pragmatic and original account of the subject, at times also offering unique insiders' insights. The book holds to its reputation as being both broad and profound, the ideal foundation for gaining a deep understanding of EU law. This edition reflects the law post-Lisbon. It has also been re-structured and re-designed, so as to facilitate ease-of-use. Its original authors, Derrick Wyatt and Alan Dashwood, continue to make a significant contribution. Michael Dougan, Eleanor Spaventa and Barry Rodger complete the team of authors working on this invaluable textbook and reference work. The 6th edition has already been cited in the Northern Ireland High Court by The Honourable Mr. Justice Bernard McCloskey [2011] NIQB 61.

The Economic Structure of Tort Law-Clifton R Musser Professor Emeritus of Law and Economics and Senior Lecturer William M Landes 1987 Written by a lawyer and an economist, this is the first full-length economic study of tort law--the body of law that governs liability for accidents and for intentional wrongs such as battery and defamation. Landes and Posner propose that tort law is best understood as a system for achieving an efficient allocation of resources to safety--that, on the whole, rules and doctrines of tort law encourage the optimal investment in safety by potential injurers and potential victims. The book contains both a comprehensive description of the major doctrines of tort law and a series of formal economic models used to explore the economic properties of these doctrines. All the formal models are translated into simple commonsense terms so that the "math less" reader can follow the text without difficulty; legal jargon is also avoided, for the sake of economists and other readers not trained in the law. Although the primary focus is on explaining existing doctrines rather than on exploring their implementation by juries, insurance adjusters, and other "real world" actors, the book has obvious pertinence to the ongoing controversies over damage awards, insurance rates and availability, and reform of tort law-in fact it is an essential prerequisite to sound reform. Among other timely topics, the authors discuss punitive damage awards in products liability cases, the evolution of products liability law, and the problem of liability for "mass disaster" torts, such as might be produced by a nuclear accident. More generally, this book is an important contribution to the "law and economics" movement, the most exciting and controversial development in modern legal education and scholarship, and will become an obligatory reference for all who are concerned with the study of tort law.

Economic Analysis of Accident Law-Steven Shavell 2009-06-30 Accident law, if properly designed, is capable of reducing the incidence of mishaps by making people act more cautiously. Scholarly writing on this branch of law traditionally has been concerned with examining the law for consistency with felt notions of right and duty. Since the 1960s, however, a group of legal scholars and economists have focused on identifying the effects of accident law on people's behavior. Steven Shavell's book is the definitive synthesis of research to date in this new field.
